TO THE
CAUSE OF DISEASE
AND
RATIONALE OF CURE.

SHOULD BE READ
By all Classes and Professions, as it sets forth
facts of the highest importance to
every human being.

Dr. CHAMBERLIN,
Electrical Physician,

PERMANENTLY LOCATED AT
NO. 50 BOND STREET, NEW YORK.
JULY, 1863.

A SHORT ADDRESS TO THE PUBLIC.

In the presentation of a new philosophy the first thing demanded by the public is evidence to show that the author's claims are of utility, and based upon science, without which they cannot stand the test of investigation.

The object of this appeal to the public, is to present a brief analysis of the principles of Medical Electricity, with a collection of facts in the healing art demonstrating that this subtle and mysterious agent is not merely useful in some cases, but an indispensable one in the cure of disease in all its varied forms.

In the fall of 1862, Dr. Chamberlin arrived in New York, and located at No. 50 Bond street, and announced through the public journals that he had made an important discovery in Medical Electricity, from which he had deduced a reliable system of treatment for the cure of a class of diseases that had heretofore baffled all medical science, art, and skill. He also published certificates, letters, and resolutions, from the highest and most unimpeachable sources, from gentlemen residing in Philadelphia, Cincinnati, Rochester, Albany, and elsewhere, certifying in the most emphatic terms that his discoveries and claims were based upon science, and that the cures effected by this treatment were the most remarkable on record. This startling announcement induced many to investigate the subject and ascertain if the statements set forth were reliable.

Since then his rooms have been thronged with patients, suffering from nearly every form of disease, in many instances from ten to fifteen years' duration, and in nearly every case where the treatment was continued, a perfect cure was effected, and even in the most hopeless cases permanent relief was given.

As to the nature of this wonderful and mysterious agent but little was known till the discovery of Dr. Franklin. This discovery opened a new era in electrical science, and instead of longer looking upon it as a death-dealing enemy, it was hailed as a harbinger of safety, and man sought protection even from its fiery darts. It was further discovered that Electricity was ever present, and all-pervading, having such a strong affinity for certain metals, that it could be made to traverse a wire for miles and make known its presence.

This fact led Prof. Morse to an investigation of the subject, and a more intimate acquaintance with its nature and tractability. In addition to its wonderful powers of locomotion, he found it possessed organs of speech, responding in familiar accents to the will of its master, and capable of writing with the grace and rapidity of a ready penman, and that by means of this mysterious messenger we could hold familiar converse, though thousands of miles intervene.

Its influence upon the vegetable kingdom is equally surprising: by its accumulated presence, vegetation can be brought into existence almost at the will of the operator; a full growth of salad can be grown from the seed in a few hours; and by its invigorating presence the drooping plant almost instantly revives. The reader might here ask, if Electricity is capable of doing all this, what may it not yet accomplish. The electrical discoveries above adverted to have conferred incalculable benefits upon our race, but nothing in comparison to what it has already accomplished and is destined further to accomplish for the relief of diseased humanity.

By its magic powers the ravings of the maniac are quieted; the palsied mind re-

gains its powers; inflammations subside, tumors are reduced, ulcers are healed; the blind are made to see, cripples to walk, the dumb to speak; nervous irritation is allayed; the deaf hear, contracted muscles are relaxed; the weak become strong; and every muscle, nerve, gland, tendon, and tissue is brought into harmony and health.

It seems needless at the present time to advocate the therapeutic powers of Electricity, as the medical journals, both of this country and Europe, teem with the most marvellous reports; and from the accumulated evidence daily forcing itself upon us, no doubt seems to be entertained among the intelligent, of its final triumph as a universal curative agent. The main objections raised by medical men and others who occasionally employ Electricity by way of experiment, is its want of reliability in producing uniform results: in some cases they find the effect to be most astonishing, removing obstructions that have resisted all other prescribed remedies at a single touch of the electric element, while in other similar cases the effect seems right the reverse.

Such being the case, many have abandoned its use altogether, while others attribute their want of uniform success to one grand secret, viz.: ignorance in knowing *when, where, and how* to apply it. This important *secret* is now discovered, as a careful examination of the following evidences will show.

In Dr. Chamberlin's early experiments with the ordinary electrical apparatus, he was impressed with the fact that Electricity possessed the power of instantly changing the electrical forces of the human system, relieving pains, and sometimes permanently removing certain forms of disease; but from the fact that no uniform results could be obtained, and in many cases the application seemed to counteract the object in view, one of two things appeared manifest: either ignorance in the application, or a want of efficacy in the agent itself to accomplish the desired results. To obtain light, if any had been discovered upon the subject, he examined all the principal publications upon electrical therapeutics, and not one fact was elicited to prove that Electricity was a reliable remedial agent.

It is true that many remarkable cures were reported, but the treatment in effecting them, as laid down by different authors, was as various as the cases reported, and the mode of application seemed to be altogether empirical and unreliable, the currents being applied without reference to method or the electrical requirements of the system; and in fact, by the most celebrated authors upon the subject, it was considered beneficial in a few cases only, and doubtful even in those. Notwithstanding the conflicting opinions of authors and operators, Dr. Chamberlin continued his experiments and investigations, from day to day discovering new light, till he established a reliable system for the cure of disease by means of electricity. In the course of his experiments he found that instead of its adaptation to a few diseases only, it was alike applicable to all conditions, either acute or chronic.

He further discovered that different combinations of electricity produced different results, and for the removal of various diseases it was necessary to understand the effect of each current in all diseased manifestations, and to apply the kind indicated. From a knowledge of these important facts, Dr. Chamberlin, in the course of his treatment, brings to his aid currents of different intensity, from the ordinary inductive to the intense galvanic, capable of removing from the system mineral poisons and all other extraneous matter.

The great error in applying electricity as a remedial agent, and the failures

attending it, arise from total ignorance of its nature and adaptation to the various diseased conditions of the system: not only is there ignorance displayed in a knowledge of the currents of different intensity, but even in the effect of the opposite poles of the same current.

This mighty agent is no mere plaything; it should never be tampered with in the hands of the ignorant and inexperienced; and to insure success in its application, the following requisites are deemed necessary: First, a knowledge of the physiological relations and connections of the human system; second, a knowledge of the electrical polarities of the nervous system; third, a knowledge of the motive power, or working forces, of the body in a normal state; fourth, a knowledge of determining the locality and nature of disease by an electrical diagnosis; and lastly, a knowledge of not only the effect of the opposite poles of the same current in diseased conditions, but of all the various currents of different degrees of quantity and intensity employed for the removal of disease. Without a knowledge of the foregoing principles, far better to dispense with its use altogether.

It is evident that electricity exerts throughout the various departments of nature almost omnipotent power, producing all the countless myriads of chemical changes, all decompositions, recompositions, and transformations. It has been demonstrated by facts the most incontrovertible, that every secretory as well as excretory function of the human organism is directly under its control, that it is the cause of respiration, circulation, and digestion, as well as every other functional operation of the body.

When we take into account the nature of an agent so potent and controlling, so intimately connected with the laws of life, health, and vitality, who for an instant can doubt its capacity to remove disease, if scientifically applied? It may here be asked, for what diseases is Electricity best adapted? In reply, it may be safely said for all diseases. In every case where medicine is beneficial, Electricity is much more reliable and efficient; and in obstinate chronic cases beyond the control of medicine, Electricity, by its vitalizing and permeating influence, possesses the power of arousing the dormant energies of the body and establishing a condition of harmony and health.

Dr. Chamberlin would here add, by way of encouragement to the consumptive, the dyspeptic, the paralytic, the rheumatic, and all others suffering from what may be considered incurable maladies, that there is still hope and a fair prospect of your restoration to health, as will be seen by consulting the following certificates and recommendations from many of the first citizens of New York, which declare in the most positive terms that he *has* cured, is *curing*, and further pledges himself to cure, a class of diseases pronounced incurable by all intelligent medical men, a class of diseases which have in all ages resisted the best medical skill and remedial agencies.

To all Scientific Investigators.

If you have perused the foregoing remarks, your curiosity has no doubt been not a little excited by the claims set forth in the discovery of a new philosophy, and a new method of curing disease by means of the potent agent, Electricity. If the statements set forth be true, it is certainly worthy of your candid investigation, as it proclaims to the world a new era in medical therapeutics, and the discovery of important facts heretofore unknown—facts of the most vital importance to every human being. It claims to accomplish what all medical systems have failed to do,

that is, to eradicate from the system, by a safe and expeditious method, obstinate chronic maladies. Dr. Chamberlin invites your attention to a perusal of the following pages, and a careful examination of the following testimonials. He further invites you to visit him, and learn more particularly the nature of his discoveries, and witness their practical results, *as seeing is knowing*.

Is Electricity a Failure?

It is a very general remark among medical men that Electricity, as a therapeutic agent, has proved a failure—that its merits have been repeatedly tested and as often condemned. But still they acknowledge its controlling powers over certain forms of disease; but from its frequent failures, and the evils oftentimes attending its administration, they generally discourage its use.

This fact we are willing to admit, to wit: that it has proved a failure, like many other important undertakings, especially in the hands of the ignorant, and even the intelligent, where they have never devoted their time and talent to a proper investigation of the subject.

The adaptation of steam as a motive power at first proved a failure, and had Fulton abandoned his long-cherished theory after a few unsuccessful attempts, its utility would have been condemned, and instead of moving onward as we now do at the rate of a mile per minute, we should no doubt still be restricted to the locomotive powers of the old coach and four.

Electro-telegraphing, too, at first proved a failure, not for lack of efficacy in Electricity to accomplish all that was anticipated, but for a want of knowledge in the adaptation of means to ends. Had Morse abandoned his designs after a few fruitless experiments, the metallic network that now encircles the entire civilized globe, ramifying to every city, town, and hamlet, bringing intelligence by the swift-winged messenger of lightning, would probably never have had an existence.

These facts, borne in mind, must show to every intelligent observer, that no reliable results can be obtained upon any subject by a few random experiments, and particularly one so intricate as that of Medical Electricity, which involves not only a knowledge of all the various modifications of Electricity, but the effect of each current in various diseased conditions of the system.

These principles are seldom studied, and consequently not understood, which accounts for the disappointments and failures so general among operators; for, how can we expect uniform results without adherence to fundamental principles?

It is a very general remark, that a physician, from his education, must necessarily understand the medical use of Electricity. The fact that a man has been educated a physician and that he understands the nature of drugs, is no evidence that he can apply Electricity scientifically in any of its various forms for the removal of disease. The study of Electricity as a medicinal agent is not introduced into our medical colleges, and therefore constitutes no part of a medical education.

Medical men seldom employ Electricity, except in the most extreme inflammatory or paralytic conditions, in which is required a most intimate knowledge of the subject to produce a favorable result; and then, instead of making a proper electrical diagnosis and administering according to the electrical requirements of the system, they generally apply it in the most reckless manner, frequently by shocks, or a rough vibratory current, when the mildest continuous galvanic current is necessary.

Such being the facts, no wonder medical men have discouraged its use, and no wonder that their subjects, after being thus tampered with, are alike incredulous as to the utility of medical Electricity.

The fact is, they have never investigated the subject. They have no knowledge of the laws of electrical affinity and polarity; they know nothing of the different influences produced by its different combinations, and all their operations are nothing more or less than a series of random experiments; and when relief by chance is obtained, it is looked upon as a lucky hit rather than the result of any fixed law. So far Electricity has proved a failure, and ever will, in the hands of the medical faculty, till they turn their attention to an investigation of the subject, and instead of looking upon it as an auxiliary, employ it as a principal, for in it alone are embodied all the curative properties in nature, and, when intelligently directed, it is capable of reaching all diseases that are curable.

Electro-Magnetic Machines, accompanied with Guides.

Within the past few years an extensive business has sprung up in the manufacturing of electro-magnetic instruments, and thousands have been scattered broadcast, and have found their way into the hands of all classes, both wise and otherwise.

These machines are accompanied with guides giving directions for treating different diseases.

These guides are principally extracts from the works of early authors, who were as ignorant of electrical science and the medical use of Electricity as those who plagiarize their old productions at the present time.

Among the many so-called guides that have come under my observation, not one lays down any correct system for the treatment of disease, and in most instances, the directions given by different authors are conflicting, and, if carried out in certain cases as directed, the result would be exhaustion and ultimate death.

It is true that occasional cures are effected by this treatment, and the same may be said of the forked lightning from heaven, as by it confirmed invalids have been restored, in certain instances, to health, although it is a hazardous experiment.

And as a caution to those unacquainted with the subject, Dr. Chamberlin would say, never allow yourselves to be experimented upon by the ignorant with an agent so potent as electricity, simply to obtain doubtful results.

Electricity no failure, but a reliable Therapeutic Agent.

An experience of many years has demonstrated, by the most incontrovertible tests, that Electricity will cure disease, and that too after all other tried remedies have proved a failure.

This is not mere assertion, but the evidence adduced will be of a character that cannot be refuted. In this matter Dr. Chamberlin has arrived at no erroneous conclusions, as his opportunities have been the most ample for testing its utility—not alone by the aid of a single electrical apparatus, but with all the various combinations of currents, as to quantity and intensity; neither has his experience been confined to a particular class of diseases, but has extended to nearly every form and grade to which flesh is heir. His experience thus far has established the following facts, viz.:

First. That in the incipient stage of disease, where the electric forces of the

body are alone at fault, and internal medication may be of service, a few well-directed electric currents will regulate the electrical polarities of the body, harmonize the discordant elements, and bring about a condition of health.

Second. That when the case has become obstinate, paralyzing the nervous communications, changing the constituents of the fluids, and the effect of medicine is precarious, Electricity possesses the power of removing the electric obstructions, equalizing the circulation of the blood, and restoring harmony in the constituent elements of the fluids.

Third. That in all obstinate chronic affections, where not only the electric element and the fluids are at fault, but where the material organs have changed, and are no longer capable of performing their functions, and all internal medication has proved impotent, Electricity is capable of arousing the dormant energies, exciting the health forces, and if the treatment be properly continued, and where there is no lesion, or decomposition, and the system is not worn out by age or excess, a cure may be effected in every case.

New York References.

The attention of the public is particularly directed to the following Report from many of the first citizens of New York, certifying to Dr. Chamberlin's discoveries, and the efficacy of his treatment.

A short time since our attention was arrested by an announcement in the public journals of a new discovery in *Electrical Science*, which, if true, must transcend in importance all other discoveries, *the lightning rod and telegraph not excepted.*

At the present time thoughtful minds everywhere are looking for the revelation of new and important discoveries in science, and when an individual presents his theory, claiming to have discovered new light, and to have removed the veil of obscurity from a subject of the highest importance, upon which much has been written and more conjectured, it is proper that his claims should be presented, and carefully examined and tested.

We refer to the discoveries in *Electricity*, as a therapeutic agent, by Dr. CHAMBERLIN, at No. 50 Bond street, New York, a distinguished *electrical physician*. The announcement of Dr. C., united with an invitation to all who desire to investigate the subject, induced us to call at his rooms, and ascertain, if possible, the truth of his claims. In conversing with the Doctor, we learned that he had devoted many years to the study of, and experiments in electrical science, particularly that branch of it relating to the electrical forces of action in the human body, the cause of disease, rationale of cure, &c., and from the principles discovered, claimed to have perfected a system of treatment for the removal of all maladies at all curable, by means of the various combinations of electricity.

The Doctor's Theory is that the human system is but a galvanic arrangement, with its acids and alkalis, constituting the positive and negative forces, and that every mental and physical manifestation, either voluntary or involuntary, is the result of this antagonism; that digestion, circulation, secretion and excretion, are wholly attributable to the law of electrical influences; that the nerves are the conductors of *Electricity*, and that there is a polar action established through the nervous system, which connects with every part of the body, establishing and preserving a proper balance of the electric element, which constitutes health and a disturbance of which causes disease; that there are strictly but two conditions of disease, the one positive, the other negative; and as *Electricity* possesses these two inherent principles, it will, if applied according to the electric polarities and requirements of the system, arrest, or in other words neutralize the disease by the restoration of proper polar action.

The Doctor further asserts that all drugs taken into the system act strictly upon electrical principles; that from decomposition the latent electricity is set free, and that, through the electrical polarities of the nervous system, all changes are produced for good or for evil; that in the incipient stage of disease it may tend to equalize the forces, and restore harmony; but after the case has become refractory, paralyzing the nervous communications, and changing the constituents of the fluids, and arresting the digestive action of the stomach and its power of appropriation, no internal process of medication ever has, or ever can, succeed in removing the cause of the disease, its only tendency being to multiply and complicate the symptoms.

On the contrary, *Electricity*, being the vital element upon which life depends, can be directed to any part of the body, and, even after the vital functions seem paralyzed, possesses the power of arousing the dormant energies, equalizing the circulation, and restoring the system to a self-sustaining condition.

The undersigned, feeling deeply interested in the subject of electrical science, and especially that branch of it which relates to the cure of disease, as practiced by Dr. CHAMBERLIN, take occasion to affirm, both from our own experience and observation, that we believe it simple and effective, and deserving the attention of the afflicted. We have witnessed the complete restoration to health of many persons who have been long ill, who have enjoyed the benefits of the advice and skill of some of the most eminent medical practitioners of this and other countries, without relief or even hope of relief. In some instances the disease of years' standing has yielded almost at the first touch of the electric element, while in others it has required a more protracted treatment, and, without exception, the most satisfactory results have followed.

One very important feature of the treatment is that no time is lost in experimenting with disease. By means of an electrical test an accurate diagnosis is given at once, determining the locality and character of the disease, and indicating the treatment to be pursued.

From what has been suggested, it will be apparent that no mere charlatan in his profession, no student of a day, could be relied upon to apply this mighty agent to the human organism.

We desire, therefore, thus publicly to make it known that Dr. CHAMBERLIN has demonstrated to us, in the most satisfactory manner, that his claims are based upon immutable laws, that his treatment is founded upon scientific principles, and we most cordially recommend all who are suffering from physical ills to consult Dr. CHAMBERLIN, under whose supervision they will learn for themselves that what we have affirmed in reference to his system is true and entitled to their grateful recognition.

WONDERFUL DISCOVERY AND WONDERFUL RESULTS,

BY DR. CHAMBERLIN,

No. 46 Chapel Street, Albany.

A few weeks ago our attention was attracted by the announcement of Dr. CHAMBERLIN, claiming to have made an Important Discovery, whereby the most obstinate, acute, and chronic diseases could be effectually eradicated from the system by the various modifications of Electricity.

Having Friends under treatment by Dr. C., and desirous of obtaining light upon the subject (if any had been discovered), we were induced to call and investigate his claims as to the discoveries set forth. By conversing with the Doctor, we learned that he had devoted much time and study to the investigation of Electrical Phenomena, and if his theory was true in reference to the cause of disease and rationale of cure, all others must be at variance with Nature.

He Claims that Electricity is not only the connecting link between the Spiritual and Material Universe, but is the medium through which the Mind governs the Living Organism; that secretion, excretion, digestion and circulation, as well as every other functional operation of the body, are alone the result of Electrical action; that health can only be maintained by a proper equalization of this element, a disturbance of which produces derangement and

disease; and that Electricity, being the controlling force of the body, if applied in harmony with the polarities of the brain and nervous system, is all-powerful and all-potent in establishing a condition of equalization and health.

He further Claims to have discovered a reliable method of locating disease, and of determining its positive or negative character by means of Electrical contact; also, the relation existing between the human body and the positive and negative action of the currents; the direct influence of all the various modifications of Electricity, from the inductive current to the pure galvanic, capable of dissolving the hardest metals, and finally the direct application of the currents to diseased conditions of the body, treating each according to its requirements and the fixed laws governing the action of Electricity.

Result of Investigation.—The following Report is not based upon rumors or hearsay; neither is it the result of casual observation, but was arrived at after a careful observation of facts, transpiring from day to day in our presence at Dr. CHAMBERLIN's office, where he was testing the practicability of his Discovery in various forms and conditions of disease, considered incurable by all other modes of treatment.

We have Witnessed the case of a gentleman, pronounced by medical men Pulmonary Consumption, advanced stage, violent cough, copious expectoration, greatly emaciated, restored to his usual health by Dr. CHAMBERLIN in a few applications of Electricity.

We have Seen the unparalleled power of Electricity exhibited in numerous cases of Dyspepsia, one in particular of several years' standing, with the most aggravated symptoms, cured by Dr. C. in four Electrical operations.

A Remarkable Case came under our observation of a gentleman who had been suffering for several years from a complication of diseases, severe cough, loss of appetite, coldness of the surface and extremities, very deaf, extreme prostration, with an indurated enlargement extending across the diaphragm. The change was remarkable, and in a few days he was restored to perfect health, and the enlargement has been rapidly diminishing since the first treatment.

A very Stubborn and aggravated case of Constipation, attended with mucous diarrhoea, extreme pain and general debility, without any natural action of the bowels for seven years, entirely dependent on medicine, was permanently cured by Dr. CHAMBERLIN by Electrical action. This case had for seven years resisted the best medical skill and remedial agencies.

We have Witnessed a stubborn case of Bronchitis, of fourteen years' standing, cured by Dr. C.'s Electrical treatment.

The Most Surprising demonstration was performed on a gentleman impotent for three years—cured in ten minutes, and has remained well for over two months. He was also cured of epileptic fits of six years' standing.

His Demonstrations have been alike successful in Piles, Rheumatism, Paralysis, Catarrh, Neuralgia, Diarrhoea, Affections of the Brain and Spine, and numerous other obstinate paladies.

Wonders of Electricity.

PHILADELPHIA, May 6th, 1860.

What we have witnessed of late in the wonders performed by Electricity, as administered by Dr. Chamberlin, located at No. 1220 Walnut St., Philadelphia, where he is successfully testing his new discovery of the Electrical polarities of the Brain and Nervous System, by which he claims to control all curable diseases.

Having friends under treatment by Dr. C., and anxiety to gain information, we have been induced to call and witness many experiments, and to satisfy ourselves as to the claims of his new discovery in the application of Electricity as a therapeutic agent; and we would say for the benefit of the sick who have failed to get relief from medical men, that we have seen such demonstrations in the cure of the most obstinate diseases, that we can with confidence speak positively of its effects as a curative agent on our friends and others.

We have seen a case of Pulmonary Consumption cured by a few applications of Electricity. We have seen a case of Indurated Knee-joints (immovable) of eighteen months' standing, cured

in a few days. We have seen Dyspepsia, the most obstinate, cured in four treatments. We have seen Asthma, of twenty years' standing, considered hopeless, cured in three sittings. We have seen cured a case of Heart Palpitation of five years' standing. We have seen many cases of Impotence which have baffled medical skill, also numerous cases of Seminal Weakness cured by Dr. Chamberlin; also cases of Diabetes, Rheumatism, Spinal Weakness, and other diseases too numerous to mention. And we know that Dr. Chamberlin warrants to cure all of the above diseases, and many others, after a thorough electrical diagnosis, by which he claims to decide absolutely whether the cases are curable.

Complimentary Resolutions from Medical Men and Others.

At a meeting of a class instructed by Dr. Chamberlin, in the city of Rochester, N. Y., Oct. 24, 1858, Dr. P. Shedd was called to the Chair, and Hon. S. Ashley appointed Secretary. On motion, a committee of three was appointed by the Chairman to draft resolutions and present the same to this meeting. The following resolutions, reported by the committee, were unanimously adopted:

1. Resolved, That we regard the science of Medical Electricity, in its physiological relations, a therapeutic agent, as taught by Dr. Chamberlin, in a series of Lectures, to be founded in immutable truth, and when generally understood will effect an entire change in the medical practice of our country.

2. Resolved, That we are convinced that Dr. Chamberlin has discovered an entire new system for the diagnosis and treatment of all diseases Electrically; and that the various modes of using this subtle element as a therapeutic agent by Drs. Channing, Golding, Bird, Sherwood, Paige, Kinney, Duchene, Bequeril, and numerous other American and European Electricians, have failed (although some accidental cures have been effected by these men); and that the reason why all medical men who employ Electricity fail in its therapeutic administration, is their want of knowledge of the Electrical polarities of the brain and nervous system, and the physiological relations of Electricity as a remedial agent; and that the reason why Dr. Chamberlin applies it with such triumphant success is because he has discovered Electrical facts heretofore not understood.

3. Resolved, That we regard the success we have witnessed in the treatment of Consumption, Rheumatism, Paralysis, Insanity, Female Complaints, Diabetes, Bronchitis, Spermatorrhoea, and numerous Nervous and obstinate Chronic diseases, as demonstrations of the unparalleled power of Electricity as a disease-controlling agent, when applied according to the discovery and teachings of Dr. Chamberlin.

4. Resolved, That we tender to Dr. Chamberlin our thanks for his lucid instruction and kind attention to us, individually, and as a class. That he has redeemed every pledge or assurance made by him, and that in parting from him he has our best wishes for his happiness and prosperity, and we heartily commend him to all scientific investigators, and also to the diseased of body or mind.

Also, Resolved, That the proceedings of this meeting be signed by each member of the class, and published in the city papers.

H. FISH.

To the Diseased of Body and Mind.

No matter what may be your complaints—it matters not how long you may have been afflicted, or to what course of treatment you may have been subjected, or what disappointments you have experienced, if the system is not worn out—if there is no lesion, decomposition, or destruction of parts, and a sufficient amount of vitality remains for reaction, you can be restored to health. Dr. Chamberlin here makes no random assertion, as an experience of nearly twelve years in the use of the various forms of Electricity warrants him in making the above statement.

Examine carefully the following pages, and if there is any confidence to be placed in human testimony, you must be convinced that Dr. C. has discovered a reliable process for the cure of a class of diseases heretofore considered incurable.

Call and have your case examined; and if it is beyond the reach of electrical reaction and incurable, Dr. Chamberlin will frankly tell you so.

No Charge for Consultation.

Cures in all cases guaranteed by special contract, after an electrical diagnosis, when desired by the patients.

CERTIFICATES OF CURES.

The attention of the public is now particularly directed to the following remarkable cures, representing a great variety of cases.

The object of bringing before the public such an array of evidence, is not merely to show that Dr. Chamberlin has made an important discovery, nor that Electricity is a curative agent, but more particularly, that the diseases here cured are such as are never benefited by any other treatment.

In nearly every instance the patient had been suffering for many years, had sought relief through the most popular channels, but all to no avail, as the diseases continued to increase in complication and severity, till a cure, or even relief, was despaired of.

These cures are not of ancient date; are not of a questionable character; the parties representing them reside mostly in New York; those at a distance can be addressed by letter and all desired information obtained.

NEW YORK, *June 4th*, 1863.

Is there a cure for chronic disease? This question is daily asked by thousands, and the response has always been in the negative.

I now give a brief statement of my own experience and what I have witnessed in the case of others.

I have been the chief of sufferers, and in many instances, to all appearance, even unto death.

Seven years ago I had a run of fever, and was subjected to calomel treatment. I finally recovered, so as to drag around mechanically, with vital energies paralyzed and health forces arrested. Since then I have been a mere wreck of humanity, and a subject for medical men to experiment upon. On several occasions I have fallen as if dead, and remained insensible for hours; the doctor was called, calomel administered, and, when it failed to relieve, an emetic was given to save life. For years I had been bloated, even to deformity, about the stomach, liver, and abdomen; I was in constant misery, had no appetite, and the little I did eat only aggravated; liver, stomach, and bowels refused to work, except under the stimulus of exciting drugs, to which I had to resort every few days to remove the bilious accumulation. Such, in fact, was my condition, that I had banished all hope of cure or even relief. Last November, I read the announcement of Dr. Chamberlin, claiming a new discovery for the cure of chronic diseases, by a galvanic process. The doctor's theory seemed so plausible that I availed myself of his treatment. The effect was magical; my whole system was soon in healthful action, and what surprised me most was, after a few days, the entire disappearance of the enlargement about the diaphragm. I will here add that my health has been uniformly good for several months.

Since my recovery, I have recommended the treatment to several of my friends, who have also been restored to health by Dr. Chamberlin. If space would permit I could describe several cases of cure that came under my observation while at the Doctor's office, that seem nothing short of miracle.

Residence, Lafarge House.

G. W. COPEMAN.

DYSPEPSIA.

This indescribable scourge of humanity can only be appreciated by those who have experienced all its horrors, and converted the stomach into a chemical or medical laboratory.

The attending symptoms are depraved appetite, fulness about the stomach and diaphragm, irregularity of the bowels, acidity, flatulence, darting pains through the shoulders, emaciation, and general debility. This disease, once seated, seems to fortify itself against the entire materia medica, and no reliable remedy has ever been found to stay its ravages, till Dr. Chamberlin's late discovery of the polarization of the glandular system with the stomach and secretory functions, and the lacteals and thoracic duct, which regulates the functional operations of all parts involved. He has cured individuals in three days, who have consulted the best medical skill in this country and Europe, and failed to find relief.

METROPOLITAN HOTEL, NEW YORK, *March 20th, 1863.*

Dyspeptics rejoice! As your day of deliverance has arrived.

Over ten years ago, dyspepsia selected me for her victim, and my sufferings since that have been of that nature that no language can describe.

My stomach has been turned into an apothecary's shop, or rather the contents of a drug store has been turned into it, until I was reduced to that stage that relief seemed impossible. I felt as if there was a girdle drawn around me at the diaphragm, drawing a little tighter every day. I had no natural appetite, and the little I did eat produced the greatest sufferings; my whole system sympathized with this condition, and the anguish of body and mind were beyond all description.

While in New York my attention was directed to the discovery of Dr. Chamberlin for the cure of dyspepsia and other diseases by Electricity. I called on him. I should before have stated, that in addition to other troubles, had seated upon me a troublesome rheumatism of five years' duration, depriving me of the natural use of my limbs.

I subjected myself to a course of the Doctor's peculiar treatment, and the result may be given in a few words; after a few visits my health energies were all restored, could eat and drink as I chose, and no pain followed; the muscles about the stomach relaxed, and the contraction disappeared; my limbs became free and natural, and all symptoms of rheumatism disappeared, and I can truly and joyfully say that I am once more a well man.

Residence, PITTSBURG, PA.

JAMES MILLINGAR.

NEW YORK, *June 8th, 1863.*

DR. CHAMBERLIN—*Dear Sir*: It affords me much pleasure to state that a few of your electrical applications have restored me to perfect health, after suffering for a long time with a troublesome dyspepsia, which deranged my entire system and deprived me of the means of enjoying life.

I look upon your discovery as a great triumph in the healing art, and a godsend to humanity. From what I have experienced in my own case and learned from other reliable sources, do not hesitate to recommend your treatment to the afflicted as safe and reliable.

Yours truly,

No. 238 MADISON ST.

HERBERT A. LEE.

A Remarkable Cure of Rheumatic Gout.

No. 158 ORCHARD STREET, NEW YORK, *May 15th, 1863.*

DR. CHAMBERLIN—*Dear Sir*: Feeling most grateful for a speedy and effectual recovery from one of the greatest ills that ever befel mortal man, I take this method of returning my sincere acknowledgments of your wonderful discovery for the cure of disease.

For five years I was a martyr to rheumatism; first in the hip, which caused me to limp as I walked, and was very painful. I sought the advice of eminent physicians, who for two years failed to remove the complaint, and I continued to get worse till completely prostrated; the intense pain all over my body finally settled in the foot and ankle, and was considered

incurable; my limp was then changed to a hobble, and while urging myself along, I have shrieked aloud in perfect agony. I had tried so many remedies, internally and externally, without relief, that I despaired of ever again enjoying life and its blessings. In fact, I had become a picture of misery to myself and everybody around me. At this time I was recommended to consult you at No. 50 Bond-street. With no hope of success, but as a drowning man will catch at a straw, I mechanically followed your directions, and was cured so suddenly that I could scarcely believe it myself; but when, after a month, I found all my energies restored, found I could walk, work, enjoy life as other men, it was then time to banish all skepticism, and hail with joy this new and wonderful discovery that has made a man of me again; and I say to the limping and gouty, go and do likewise.

I cheerfully invite all who doubt the efficacy of electricity to call on me, and my fellow artists will testify to the facts of the foregoing statement. Certificates, with regard to the truth of the above, will be furnished to all who desire.

In hopes this will be the means of inducing the afflicted generally to go and get well I beg leave to subscribe myself, your most obedient servant,

CHARLES F. HUBBS.

OFFICE OF AMERICAN BANK NOTE COMPANY, }
CUSTOM HOUSE, WALL STREET. }

NEW YORK, *March 18, 1863.*

For ten long years I have been a diseased man, with a troublesome eruption upon my body. Soon after this appeared, a pain commenced in my nose, affecting my eyes, and irritating the mucous surface down to the throat; in fact it seemed as if it was on fire; the membrane was so swollen that the nostrils were completely closed, so that I had to breathe entirely through the mouth; the same disease appeared to affect my whole body, inflaming the blood, so I was in constant misery. I doctored for ten years, and daily grew worse. As the last resort, I came to New York, and tried Dr. CHAMBERLIN's new method of curing disease by Electricity, and this time I was not disappointed. The eruption has disappeared, inflammation about the nose and throat is entirely gone, and can breathe through my nose as well as ever; all the feverish heat has left my system, skin is moist and soft, and I must here acknowledge that I have been entirely cured in a few days of diseases that have resisted all other remedies for ten years.

BENONI BATES.

NEW BERLIN, N. Y.

BRONCHITIS.

This disease manifests itself by a tickling sensation of the throat, tightness about the chest and lungs, cough and expectoration, and is caused by inflammatory action of the mucous membrane of the bronchial ramifications. Probably in the whole catalogue of diseases there is no one upon which exists a greater diversity of opinion as to the proper mode of treatment, and no one for which is prescribed a greater variety of remedies. For the relief of this disease, the following classes of medicines are extensively recommended by the *Regulars*:

Cathartics, Emetics, Expectorants, Acids, Alkalies, Laxatives, Tonics, Stimulants, Refrigerants, Antiphlogistics, Demulcents, Emollients, Rubefacients, Mucilages, Vesicatories, Revulsants, Counter-irritants, Diaphoretics, Diuretics, Sedatives, Alteratives, Antispasmodics, Diluents, Anodynes, and Narcotics.

Here we find the contents of an apothecary's shop all recommended for one and the same disease.

Some of the cases referred to below had passed through the entire catalogue of remedies, and still survived, and were at last cured, as will be seen, by a few applications of Electricity.

No. 13 COTTAGE PLACE, NEW YORK, *June 24th, 1863.*

Dr. CHAMBERLIN—*Dear Sir*: Having heard of your peculiar system of the application of Electricity for the cure of many diseases, that had baffled the skill of our most eminent physicians, my wife having been a sufferer for ten years from acute bronchitis, I determined to try its efficacy in her case. You are already aware of its result. But for the benefit of the afflicted allow me to certify that she was entirely cured in five applications, although for eight years previous she had been treated by some of the best of the Homœopathic and Allopathic school without any benefit.

I would further state that the nervous debility which had so much depressed her for years has entirely disappeared, and her general health is now excellent.

As three months have elapsed since the treatment, and no recurrence, I consider the cure permanent.

You are at liberty to use this as you see fit.

Yours truly,

W. B. BURTNETTE.

NEW YORK, *May 12th*, 1863.

I cheerfully certify, for the good of suffering humanity, what I have seen and personally experienced in the treatment and cure of diseases of about every kind by Electricity administered by Dr. CHAMBERLIN, No. 50 Bond st., New York.

I was, in the Fall of 1862, when I commenced treatment with Dr. CHAMBERLIN, a mere wreck, suffering from a troublesome catarrhal affection of twenty years' standing; the mucous membrane from the nose down the bronchial ramifications was highly inflamed, causing almost incessant coughing and spitting. I was also suffering from all the horrors of dyspepsia, indigestion, constipation, torpidity of the liver, and there was great bodily prostration. I had suffered from rheumatism for years, and latterly almost unto death. I did not suppose it in the power of any agent to cure me, for I had tried all the remedies that the most experienced physicians had prescribed, and was growing worse. I had also resorted to many quack medicines, urged upon me by friends.

While in this condition of body and mind, I tried the electric treatment of Dr. CHAMBERLIN, and in this I was not disappointed, as my ailments gradually disappeared, and my general health is now better than for many years, if not better than I ever enjoyed. Again, I have seen many persons casually while in the Doctor's operating room, and have observed the effect of the treatment upon them. There was not a case came under my observation that was not cured or greatly benefited, and even the most hopeless cases were so relieved that no evidence but my own senses could have caused me to have believed the change; in fact, in some instances it was like a miracle. I cannot commend in too high terms the treatment of Dr. CHAMBERLIN.

J. W. CULVER,

No. 116 Nassau Street.

Consumption Cured.

The following statement of my condition, and the means by which I found relief, is here given for the benefit of the public:

The afflictions I have suffered for the last two years are indescribable, and my diseases too complicated to name. I had a violent cough, attended with expectoration, heat and pain about the lungs, chest, and throat; no natural appetite, stubborn constipation, great weakness in the spine; have had several attacks of hæmorrhage of the lungs, night sweats and chills, was much emaciated, very weak, with pulse one hundred and thirty per minute. In this condition I found myself gradually wasting away, while at the same time I was grasping at everything that seemed to promise relief, but could find no decided benefit. About the first of last December I was advised by a friend to try Dr. Chamberlin's Electric remedy. I did; it seemed to supply just what was wanting—the VITAL FORCE. My cough and expectoration disappeared, appetite returned, and my whole system received a condition of strength and vitality truly surprising. I have increased in weight about twenty pounds, and never before enjoyed better health.

JAMES WM. MANN,

35 Chestnut, or 373 Broadway.

ALBANY, *March 2d*, 1862.

Deacon Cyrus Kenney, 38 Fifth Street, Troy, had been afflicted about two years with a disease called by *medical men* Pulmonary Consumption. In November, 1861, he was confined most of the time to his room, coughing almost incessantly, expectorating nearly a quart in twenty-four hours; could get no sleep only from the effects of morphia; was greatly emaciated, and in fact was supposed by his friends that he could survive but a few weeks at the longest. He further states that he has been healed by Dr. Chamberlin, and for the last eight months has enjoyed good health, attending to business as formerly.

In a recent letter received from Deacon Kenney, dated June 16th, 1863, he makes the following remarks: "Had it not been for your electric treatment I should no doubt long since have been in my grave; my health is now good, and has been uniformly so since my recovery." Those suffering from pulmonary complaints, should by all means write to Deacon Kenney, Troy, N. Y., and learn the particulars of his case.

RHEUMATISM (Acute).

This great conqueror of nervous vitality has never been thoroughly subdued till Dr. Chamberlin's late discovery, which never fails, in the first, second, or third application, to alleviate pain, abate the inflammation, and reduce the swelling.

RHEUMATISM (Chronic).

This is the result of over inflammatory action, generally seated about the joints, exhausting nervous vitality, checking the synovial secretions, causing enlargement, and sometimes induration.

At times it fixes itself upon other parts, producing partial or complete paralysis. These conditions are easily reached by our treatment, and the diseased parts restored to healthy action.

As Electricity is generally conceded to be the mighty Samson in all Rheumatic Affections, further comment seems unnecessary. Dr. Chamberlin is curing almost daily the most obstinate cases of the above disease. He can refer to numerous cases cured of five, ten, and even fifteen years' standing.

The following are illustrations of its controlling powers:

No. 15 BOND STREET, NEW YORK, *March 30th, 1863.*

Oh! for a thousand tongues to shout the praises of Electricity.

I am now rejoicing in the recovery from one of the most horrid diseases that ever scourged humanity.

A victim I have been for thirteen years to the horrors of *inflammatory rheumatism*; for months at a time I have been deprived of the use of my limbs, with pain indescribable. Since August last I was a confirmed cripple. First of February was taken to New York to try what medical science could do for me. I was visited several times by a wise drug doctor, till my sufferings became intolerable; then tried steam or vapor baths, which seemed to take the little vitality out of me. I then learned of Dr. Chamberlin's discovery in applying Electricity for rheumatic and other complaints. A description of my case at this time is impossible, as I was a man beside myself, or rather no man at all; no sleep, appetite gone, troublesome cough, was reduced to a mere skeleton, limbs inflamed and contracted, joints swollen, muscles withered, unable to move or be moved without nearly taking my life; in fact, I was delirious. In this helpless condition I was carried into Dr. Chamberlin's office and was treated with Electricity, and instant relief followed, inflammation subsided, limbs relaxed, and in fact I was free from pain the first time in six months, had ten continuous hours of refreshing sleep, appetite returned, and in short, in a few days, my limbs were free to carry me wherever the mind directed, and in four weeks have gained thirty pounds, and am a sound and well man.

D. B. McELWEE.

Mr. McElwee writes, June 2d, that his health remains good.

No. 96 LEXINGTON AV., NEW YORK,
January 9th, 1863.

Having been treated by Dr. Chamberlin for a very severe attack of *inflammatory rheumatism*, which I have had over four (4) months, and feeling so grateful to him, I have written these few lines that others similarly afflicted may find as speedy a cure as I have had. After the first application of his Electricity I felt great relief, and now after only *four*, feel myself entirely recovered and able to resume my duties again.

WM. LEE DARLING,

A. A. Paymaster, U. S. N.

Stubborn Case of Aphonia cured in Five Minutes.

NEW YORK, *June 14th, 1863.*

Do the dumb speak? Yes, verily.

No one can estimate the gift of speech till once deprived of the power of utterance; when this is lost, the soul can only reflect its images upon its own mirror.

For six weeks I have been as dumb as a mute, unable to articulate; vocal organs completely paralyzed. I sought relief through the popular channels, took various internal prescriptions, and subjected myself to cauterization of the throat, but no benefit resulted. By a friend who had been restored to health by Dr. Chamberlin, I was recommended to try his treatment. I did, and the result was wonderful, if not a miracle; in less than five minutes my speech was restored, and I was able to converse as well as ever; and all this was accomplished by a few passes of Electricity.

Residence, Newburg, N. Y.

CAPT. JAS. W. WISE.

NEW YORK, June 11th, 1863.

DR. CHAMBERLIN—Dear Sir :

Who shall decide when doctors disagree?

For seven years I have been very much afflicted : one doctor decided that my troubles grew out of my liver, another the stomach, another the spine, &c.

There was certainly some philosophy in all this, as those parts were at times very annoying. As to their diagnoses, and prognostics, I should have raised no objections, could they have cured me, but as they failed in that, I thought they must be ignorant of the nature of my disease and appropriate remedies, or that my case was beyond all help. For the last few years my condition had become very alarming, and in addition to the increasing trouble about the stomach, liver, and bowels, my back about the kidneys was very weak and painful; my legs became numb, and in fact at times I was nearly deprived of the power of locomotion. I had of late come to the conclusion, that unless relief could soon be had, I should have to give out altogether. The fact that my brother, D. B. McElwee, was snatched from the very jaws of death by your galvanic treatment, induced me to try also; when I consulted you I was in perfect misery, could get up and down only by the greatest efforts. The galvanism was applied to me, and I must here state that after two treatments, all my troubles were entirely removed, and I have truly been galvanized physically into a new existence. For the good of humanity you are at liberty to publish the above statement.

Residence, Walker's Valley, Ulster co., N. Y.

J. McELWEE.

DIABETES, AND OTHER URINARY COMPLAINTS.

The horrors of Diabetes are only known to subjects of this peculiar disease. This malady is attended with intense thirst. Although gallons are sometimes drunk per day, still the thirst is never allayed. The urine loses its acidity, and changes to a saccharine. The system seems to have lost its vitality, and entered into an extreme negative state, and no process of medication has ever been able to restore the vital energies. No matter whether in cases of saccharine urine, incontinence of urine, retention of urine, destitution of urine, or painful or erratic urination, Dr. Chamberlin's system of treatment is all potent and all powerful in removing the obstructions, regulating the secretions, and bringing the system back to a healthy condition.

Read the following :

To the Public and Diseased Generally.

The following is a statement of facts in reference to my condition for the past twelve months, and also the manner by which I was restored to health :

About twelve months ago I had a severe attack of Diabetes, attended with other difficulties too numerous to mention. My desire for drink was constant, and although I drank gallons per day, my thirst was never allayed; was only able to sleep at short intervals, which seemed like a trance. The mucous surface of my mouth and throat had become so parched and feverish, that I was in constant misery. I was also suffering from all the horrors of Dyspepsia, loss of appetite, Nausea, and frequent and severe attacks of vomiting; and so prostrated was my general system, that I was scarcely able to move about. I had availed myself of the science and skill of distinguished medical men, both of the Allopathic and Homeopathic school, and exhausted their catalogue of remedies, but found only temporary relief. In this condition, when every ray of hope seemed paralyzed, I heard of the discovery of Dr. Chamberlin, in the use of Electricity, and the wonders he was performing in curing disease, and placed myself under his treatment; and, to the astonishment of myself and friends, in two operations my Diabetes was controlled, and other difficulties soon disappeared; my appetite has returned, sleep undisturbed, and, in fact, I feel like one made anew.

I would further state that I have seen other remarkable cures performed by this gentleman, and would advise the diseased to call at 1220 Walnut street, and be restored to health.

I shall be glad to give any one information calling on me.

THOMAS HARROP,
Rose Mill, West Philadelphia.

PHILADELPHIA, May 1, 1860.

DISEASES OF FEMALES.

Prolapsus Uteri, Leucorrhœa, Amenorrhœa, Dysmenorrhœa. All the above diseases and other Uterine complaints have their origin in a loss of the vital power

of the body, brought on by injuries, excesses, sedentary habits, personal abuses, abortions, and the use of powerful medicines. Some of the peculiar symptoms are dragging pains through the hips and back, weakness of the limbs, and extreme languor and debility throughout the entire system. The effects produced from these troublesome maladies are almost multitudinous. Consumption, Dyspepsia, Neuralgia, Paralysis, Deafness, Blindness, Convulsions, Insanity, and even Idiocy, are not uncommon.

The ordinary treatment pursued in the above-named complaints is unphilosophic, and in many instances horrid and barbarous, subjecting the patient to pains and tortures far more distressing and annoying than the disease itself, and in many cases producing permanent injuries for life. For all such complaints Electricity is peculiarly adapted, being safe, reliable, and efficacious. The treatment is in all cases free from shocks, and even agreeable to the most sensitive nerves; and the relief is almost instantaneous.

Speaking from an extensive experience, Dr. Chamberlin would here remark, that he never fails in curing the above complaints, except in cases of organic derangement or severe injuries of the parts involved.

An experienced female operator will assist in the treatment of ladies.

SPERMATORRHEA (or Seminal Emissions).

A description of this disease and its symptoms seems unnecessary, as it stamps itself in unmistakable characters on the face of its victims in a melancholy, careworn expression, and sometimes in pimples and sores. Its contaminating influence seems to insinuate itself throughout the whole system, closing up all the mental and physical avenues, and shutting out all hopes of future happiness. It lays the foundation for nearly every form of disease, and is one of the leading causes of consumption, impotence, insanity, fits, idiocy, and even self-destruction. This disease has baffled all medical skill; and the multitude of nostrums trumped up for its cure by charlatans, only palliate, and in the end produce paralysis and impotence. On the contrary, Dr. Chamberlin's treatment tones up the health forces of the system, invigorates and strengthens the parts involved, and after a few applications every symptom of the complaint disappears.

IMPOTENCE (or Loss of Genital Power).

This obstinate and heretofore incurable disease is effectually controlled by Dr. Chamberlin's treatment, and the paralyzed parts restored to healthy action.

ADDRESS,

DR. O. K. CHAMBERLIN, No. 50 Bond St., N. Y.

Business Hours from 9 A. M. to 6 P. M.

NO CHARGE FOR CONSULTATION.

Instructions given to those desiring a knowledge of Dr. Chamberlin's method of treatment.

Suitable Electrical apparatus furnished to those competent to treat disease.
